- 
- Javascript, Python, HTML, CSS
  - SQL, MongoDB, MySQL
  - React, Bootstrap, Node, Express

---

#### Golf Tracker

Golf Tracker is an app that I designed, managed, and developed.

Using tools like Javascript, Express, Node.JS, Bootstrap, and MongoDB to create a full CRUD, user-friendly application where a registered user can track their golf games and scores per game.

<https://github.com/NathanielJ14/Golf-Tracker>

#### Yelp Camp

This is an enhanced and personal version of Colt Steels' Yelp Camp project from Udemy. It is a Javascript, Node.JS project in which I decided to implement a couple API's that I thought would make the project better like the National Parks and Unsplash API
